

Invented in Norway

**ROTTEFELLA<sup>®</sup>**  
**TECHNOLOGY**

# Be a proud part of history

**Norway.** Where the urbanity of Europe fades away, leaving you in the vast expanses of the untamed far north. Where Telemark and Nordic skiing isn't only a national sport or recreation - it's essential. For more than half the year, skis are the Nor-man's escape out into the open landscape. And the ski binding is the crucial link, transforming strength to speed and control, opening the gateway to a perfect state of being.

**Rottefella crafts** the world's most advanced, most winning, Nordic and Telemark ski bindings. We refine and reinvent them - constantly. We distill the skiing insights of our Norwegian heritage into cutting edge ski technology. We have been doing this and only this for more than 80 years. For us, it's not just about better bindings - it's about who we are.

# Introducing season 2015/2016

The **Xcelerator Pro Classic**, a binding specially designed for classic cross-country skiing, based on the winning technology of the Xcelerator system.

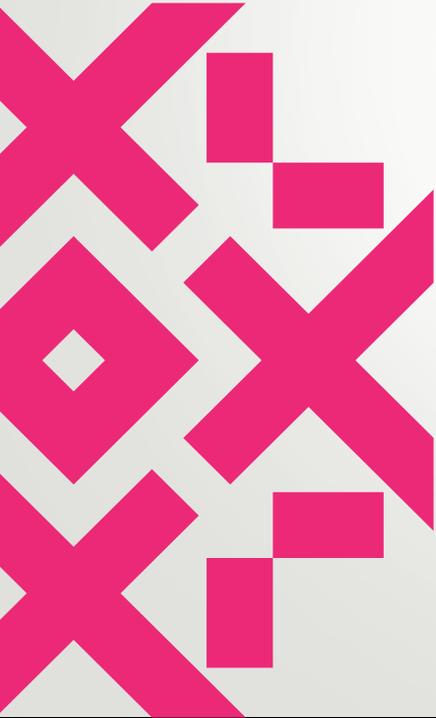

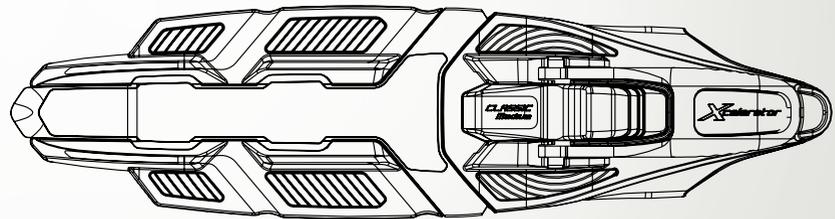

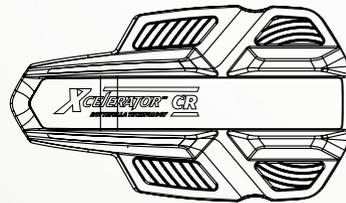

**Rottefella Performance**, a binding for those thriving on more pleasure from their skiing activities.

**Rottefella Key**, the intelligent tool that can mean the difference between an enjoyable or a disappointing skiing experience.

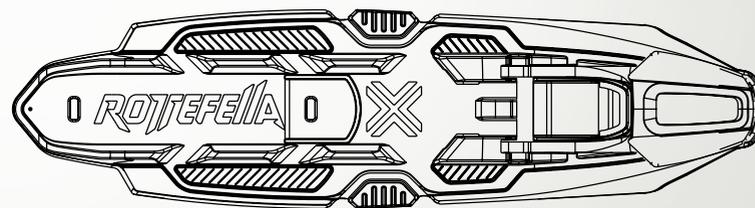

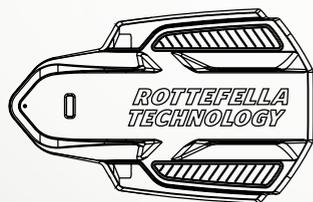

NEW

The **Xcelerator Pro Classic**, a binding specially designed for classic cross-country skiing, based on the winning technology of the Xcelerator system.

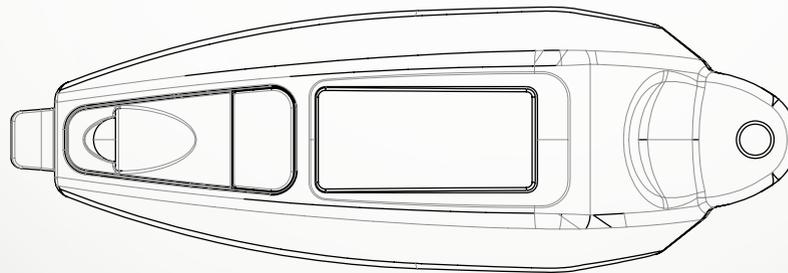

NEW

In order to satisfy an ever-increasing throng of leisure-time skiers who want more pleasure from their skiing activities, Rottefella has developed **Rottefella Performance**, a ski binding with models adapted to both the skating and classic style.

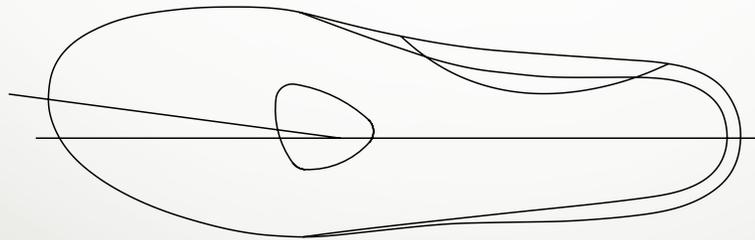

NEW

**Rottefella Key** is the tool that makes adjusting the bindings backwards and forwards on the Rottefella NIS system a very simple task. Both the skiing experience and the characteristics of the kick/glide zone alter according to where you are positioned on your skis.

**Rottefella Insoles** was launched in 2013 as the first range of specialized insoles for cross-country skiing. In a design that embodies the Rottefella philosophy of making skiing better, faster and far more comfortable. Become part of the Rottefella future with Rottefella Insoles for cross-country skiing.

# Rottfella philosophy

Rottfella's development philosophy is based on the body best utilising its full potential when in a neutral position, in other words, when standing flat. With the foot in as flat a position as possible - in the shoe and on the ski - the skier's hips are positioned further forward, making for greater balance and more thrust to the core musculature.

## More Core Power

Rottfella's bindings, insoles and outsoles can then utilise the body's biodynamics to the full, giving greater power bursts and ultimately a much better and more exhilarating skiing experience.

Powered by you. Technology by us.

**ROTTFELLA**

# Rottefella Xcelerator System

Integrating Rottefella's philosophy and technology, we have developed the Xcelerator system for speed and precision in skiing. The system comprises mounting plates, bindings, outsoles and insoles, giving the skier a neutral position.

**XCELERATOR**<sup>®</sup>  
ROTTEFELLA TECHNOLOGY

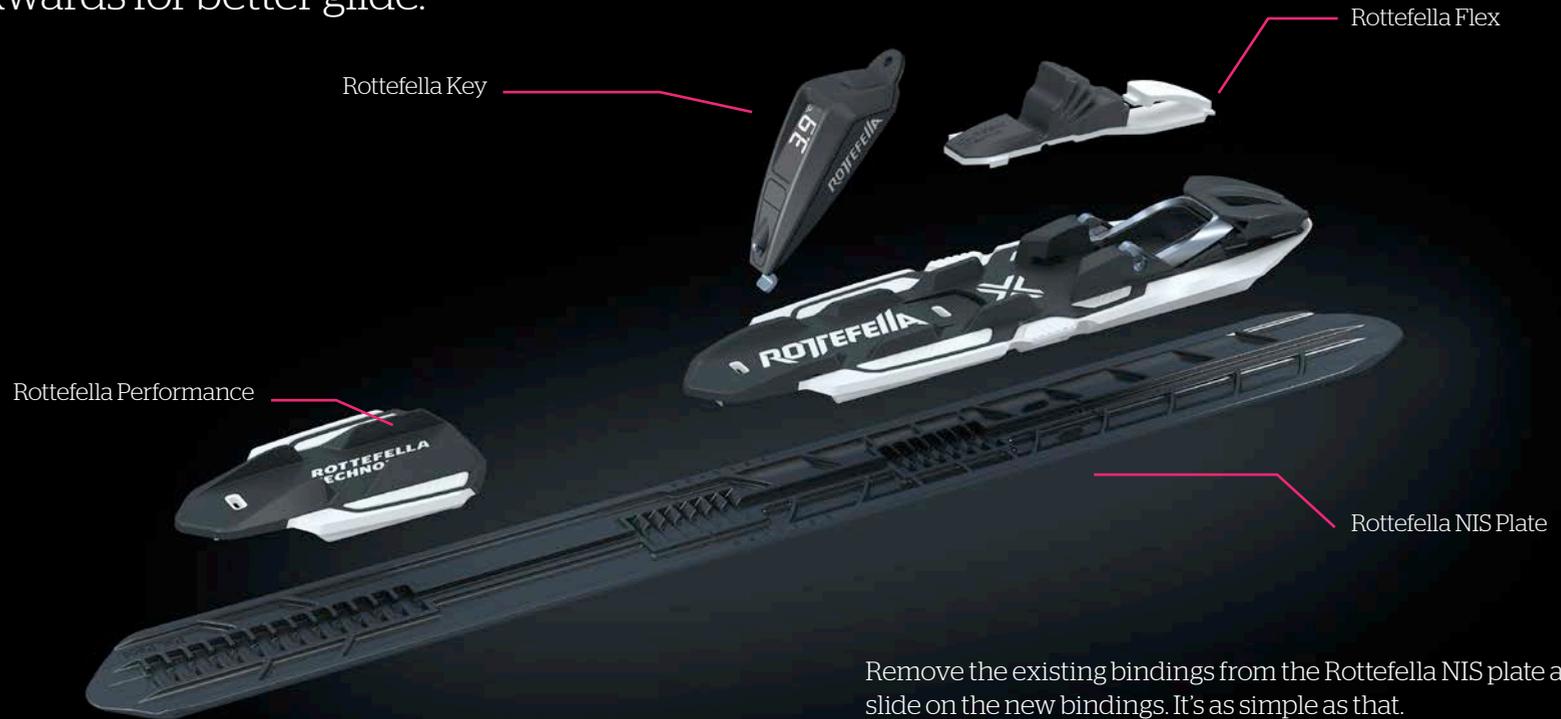

The Xcelerator system offers a range of extras for optimal fine-tuning to the skier's personal style, including the Rottefella flex system which personalises the flex resistance of the bindings to the individual's style and shoe size. Our flexors are available in three different degrees of hardness for both classic and skating.

**XCELERATOR**<sup>®</sup>  
ROTTEFELLA TECHNOLOGY

**ROTTEFELLA**<sup>®</sup>

# Rottefella technology

We have developed a complete cross-country skiing system based on Rottefella's philosophy, with bindings, outsoles, insoles and a range of accessories to heighten the skiing experience. With Rottefella technology you can move your binding on the Rottefella NIS Plate to match the snow conditions: forwards for better grip and backwards for better glide.

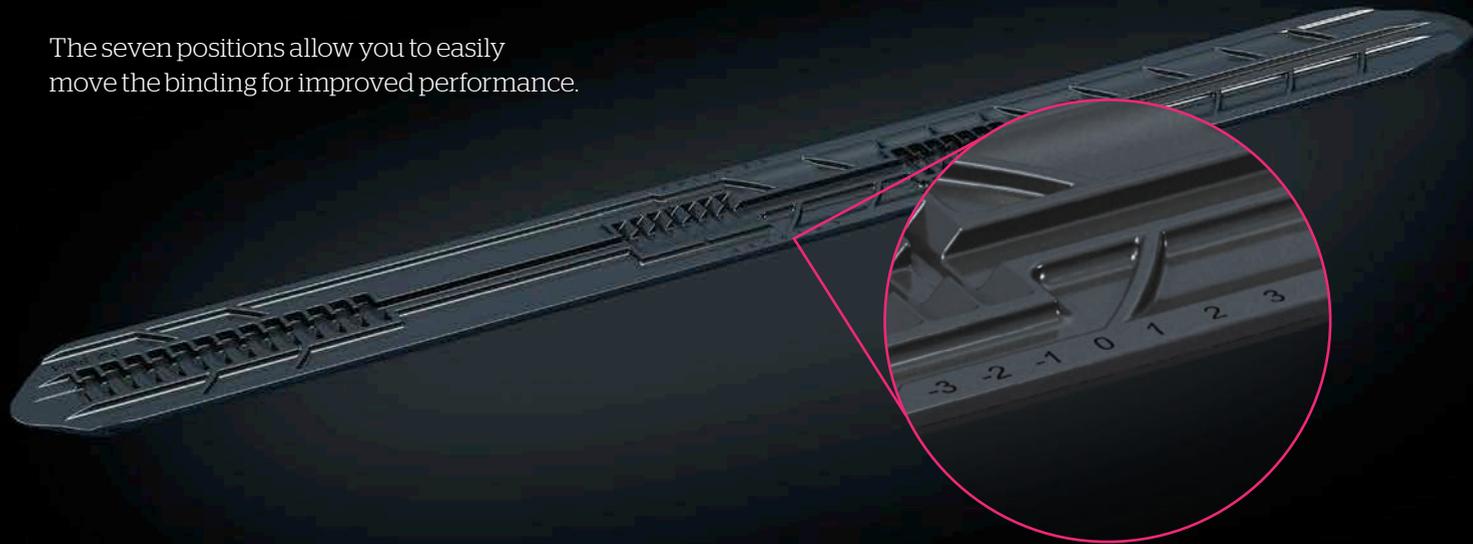

Remove the existing bindings from the Rottefella NIS plate and slide on the new bindings. It's as simple as that.

# Rottfella NIS Plate

The system offers the skier a unique opportunity for maximum skiing pleasure by using the Rottfella Key or QuickLock™ to quickly and easily move the binding backwards and forwards to Optimise speed and control.

The seven positions allow you to easily move the binding for improved performance.

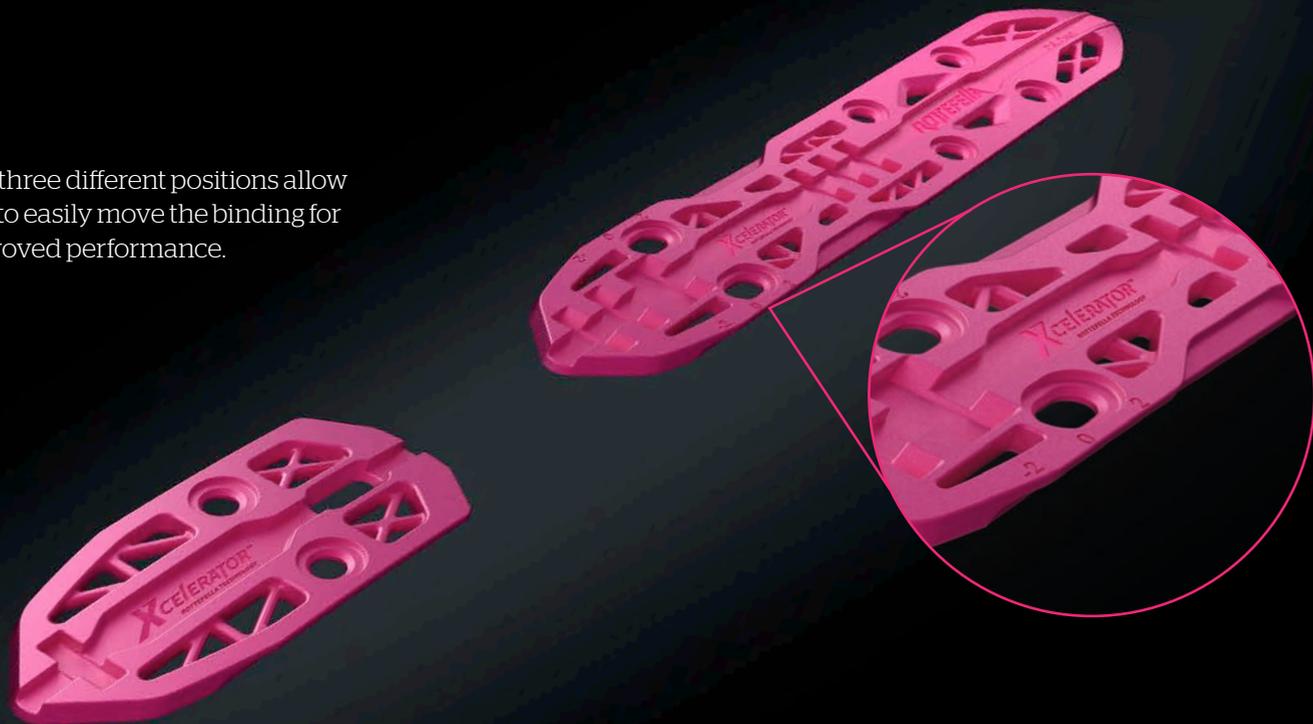

Powered by you. Technology by us.

**ROTTFELLA**

# Xcelerator Mounting Plate

The unique Xcelerator Mounting Plate gives cross-country enthusiasts all the benefits of the unique Xcelerator bindings. Compatible with skis without an integrated NIS plate and with rollerskis.

The three different positions allow you to easily move the binding for improved performance.

Powered by you. Technology by us.

**ROTFEFELLA**

# Rottfella QuickLock

Using the Rottfella QuickLock™, the ski binding can be moved backwards and forwards quickly and easily to optimise weight distribution on the ski without the use of tools. Move forward for better grip or backwards for better glide.

## Rottfella QuickLock:

Lift and move backwards for

## Rottfella QuickLock:

Lift and move forwards for

# Rottfella Key

The Rottfella Key, with a built-in thermostat and LED light, offers skiers a unique opportunity for maximum performance. Adjust the ski binding backwards or forwards to optimise the weight distribution on the ski.

**Rottfella Key:** Move the binding on the NIS Plate for better grip or better glide in Classic.

# Rottfella Flexor

Adjust your kick to your preferred ski response simply snapping a softer or harder flexor in place. The flexor should be replaced regularly to maintain its full function: The Rottfella flexor fits all Xcelerator bindings and Rottfella Performance.

## Skate Flexor

Skate Hard: Shoe sizes 45-52  
Skate Medium: Shoe sizes 41-45  
Skate Soft: Shoe sizes 35-41

## Classic Flexor

Classic Hard: Shoe sizes 45-52  
Classic Medium: Shoe sizes 41-45

# Rottefella Accessories

Rottefella develops accessories and services related to bindings

# Rottfella Key

## The intelligent tool

Rottfella key is the tool that makes adjusting the bindings backwards and forwards on the Rottfella NIS system a very simple task. Both the skiing experience and the characteristics of the kick/glide zone alter, depending on where you are positioned on your skis.

### Rottfella Key:

Adjust the binding on the NIS plate a couple of clicks backwards or forwards and it can help to combat slippery slopes and ensure improved glide characteristics. The Rottfella key also has a built-in snow thermometer and a useful LED light.

# Rottfella Racing Accessories

## Uniquely tailored to its bindings

More satisfied customers = increased profit. With Rottfella accessories, your customers will benefit from the full potential afforded by the bindings - generating increased margins for the retailer/distributor.

### Flex Classic:

All Rottfella race and Performance bindings are delivered with a medium flex (black). Switching to a softer flex (light grey) will make it easier to bring the ski forward after the kick. In particular, people with low weight and smaller feet will benefit from changing to a softer flex. A hard flex (dark grey) will make the ski more responsive, and can be used in terrain where there is a lot of doublepoling.

The flexor will wear out and should be replaced regularly to maintain its function.

# Rottfella Racing Accessories

## Uniquely tailored to its bindings

More satisfied customers = increased profit. With Rottfella accessories, your customers benefit from the full potential afforded by the bindings - and generate increased margins for the retailer/distributor.

### Flex Skate:

All Rottfella race and Performance bindings, except Xcelerator Woman edition, are delivered with a medium flex (black). By switching to a softer flex (light grey), the pressure on the front of the ski is reduced, which will prevent the skis from digging into loose snow. A hard flex (dark grey) will bring the ski back more quickly after the kick and will also increase the pressure exerted on the snow. Suitable for hard-packed snow.

The flexor will wear out and should be replaced regularly to maintain its function.

**The patented DualFlex™ System** is designed specifically for all our skate bindings. This unique system helps to keep the ski in a balanced, horizontal position when it is pulled back or retrieved after each stride.

# Rottfella Racing Accessories

## Uniquely tailored to its bindings

More satisfied customers = increased profit. With Xcelerator accessories, your customers benefit from the full potential afforded by the bindings - and generate increased margins for the retailer/distributor.

### Xcelerator Handles:

To make it easier to open Xcelerator products, a grip can be mounted on the open/close mechanism. This will be especially useful for customers who use large gloves/mittens, or children that need a better grip.

# Rottefella Racing Accessories

## Uniquely tailored to its bindings

More satisfied customers = increased profit. With Xcelerator accessories, your customers benefit from the full potential afforded by the bindings - and generate increased margins for the retailer/distributor.

### Xcelerator Skate Spacer:

The Xcelerator Skate Spacer fits the Xcelerator skate binding. The spacer slides onto the NIS plate and is placed in the correct position using the NIS key. Then, the binding slides right onto the spacer. To achieve the best possible kick, it is important that the skier is in balance on the ski. Spacers help to lower the heel so that the skier is in a more neutral position over the ski. A more neutral position makes the glide feel better. A spacer will have an especially significant impact in cold conditions with poor glide.
